# **Semiconductor Type Pressure Switches**

These pressure switches have built-in electronic circuit on a semiconductor pressure sensor and an open collector insulated by a photocoupler has been used as output. As the use of semiconductor has put movable parts away from the sensor section, high reliability and durability can be obtained.

These pressure switches are suitable for the applications not only compact, light weight and vibration-proof are required but also better substitute to conventional pressure switches.

#### Instractions

Voltage-proof test should not be carried out as semiconductor has been used.

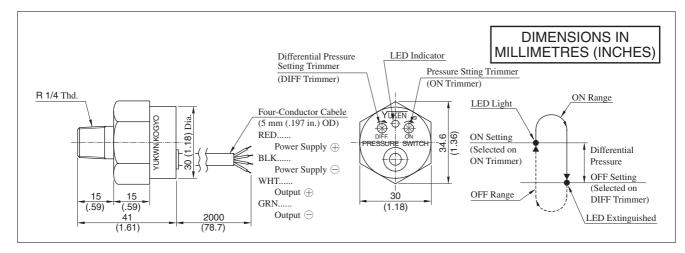

## **PRESSURE CONTROLS**

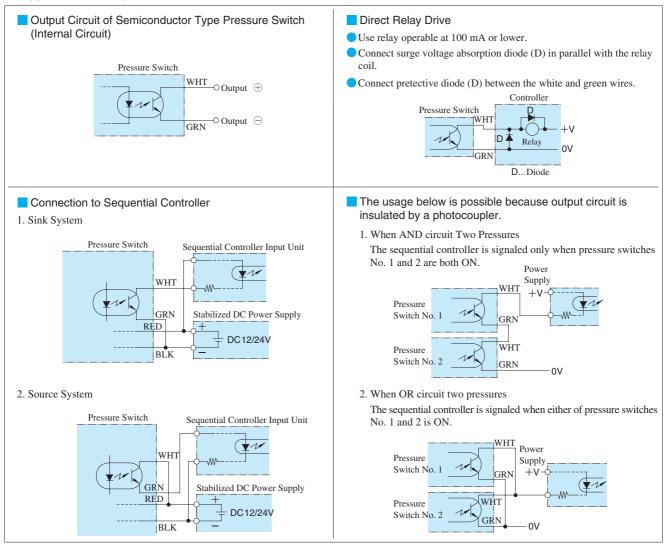

### Adjustment

- 1. Before starting, turn the ON and DIFF trimmers fully clockwise. (Trimmer Rotation Angle:0 260°)
- 2. Turn on the power.
- < ON pressure setting > Apply required pressure to the switch. Turn ON trimmer slowly anti-clockwise and stop it when LED indicator lights, ON setting obtained.

## Application Examples of Electrical Circuit

- 4. < Differntial pressure setting > Gradually reduce pressure to obtain the required OFF pressure. Then, turn DIFF trimmer anti-clockwise slowly and stop it when LED indicator goes off. The OFF setting is now obtained.
- 5. Make sure if "ON" or "OFF" setting is correct by working of LED indicator when applying or reducing pressure repeatedly several times.
